

Engineering Discipline for Salesforce That Scales

Most Salesforce instances collapse under technical debt within 5 years. We architect systems built to last—and grow—forever.

```
1 class RevOpsArchitecture{  
2     // Stop patching. Start architecting.  
3     public static void scaleGrowth() {  
4         if(technicalDebt>LIMIT) {  
5             // This is what we prevent  
6             throw new SystemCollapseException();  
7         }  
8         return SustainedRevenue;  
9     }  
}
```
